

javascriptで簡単にブロックを開いたり閉じたり

```
//javascript部分
function openTR(val){
var trObj=document.getElementById(val);
trObj.style.display = "block";
var openObj=document.getElementById("open_"+val);
openObj.style.display = "none";
var clObj=document.getElementById("close_"+val);
clObj.style.display = "block";
}
function closeTR(val){
var trObj=document.getElementById(val);
trObj.style.display = "none";
var openObj=document.getElementById("open_"+val);
openObj.style.display = "block";
var clObj=document.getElementById("close_"+val);
clObj.style.display = "none";
}
```

```
<!--html部分-->
<input type="button" onclick="openTR('1');" value="開く" id="open_1"> <br>
<input type="button" onclick="closeTR('1');" value="閉じる" id="close_1" style="display:none;
<div id="1" style="display:none;">
. . . .
</div>
```
